

Envision

A program through the Institute for Sustainable Infrastructure that rates the sustainability of a project's design, construction, and operation

STEP

1

Port NOLA submits the Louisiana International Terminal for an Envision certification.

STEP

2

The Institute for Sustainable Infrastructure conducts a thorough, third-party review of the project's design and construction.

Port NOLA will be given a rating based on:

Quality of Life

Impacts on health and wellness of nearby communities

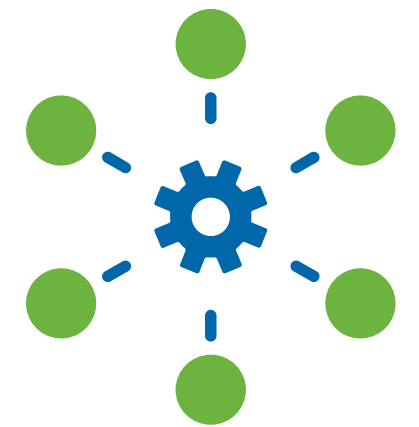

Natural World

Impacts to local ecosystems

Climate and Resilience

Amount of emissions the project contributes and the longevity of the project

Resource Allocation

Efficient use of resources, such as materials, energy, water, etc.

Leadership

How Port NOLA demonstrates leadership in sustaining human and natural environments through this project

STEP

3

If project gets a high enough rating, the Louisiana International Terminal becomes Envision certified.

The terminal must remain a good steward of the community and the environment to keep its certification.

Last Revised: April 2024
